> Lymphedema Garments

> **JOBST® FarrowWrap®**

PRODUCT INFO

FarrowWrap offers an alternative for patients who may have difficulty wearing a traditional compression garment. FarrowWrap technology allows the compression level to adjust to the user and is made of durable fabric that still provides a comfortable feel. FarrowWrap is an elastic, short-stretch garment that offers varying levels of compression, depending on the user's activity level. Compression levels are higher when users are active, while remaining at a steady level while at rest. This allows swelling prevention even when inactive. Using this technology, FarrowWrap gives reliable resting compression levels and improves the body's natural muscle pump action, all while helping to minimize swelling throughout the day, no matter what the user is doing.

VASOACTIV BIOMEDICAL TECHNOLOGIES

Home | Blood Flow | Wounds | Sepsis | Technology | About | Contact

Circulation Is The Key To Healing

VasoActive Therapy (VAT) Improves Blood Flow

Physically by pumping blood toward the heart, increasing venous return, preload, stroke volume, and cardiac output.	Physiologically by increasing microvascular flow through metabolic markers which trigger perfusion within seconds.	Biochemically by upregulating vasodilators while suppressing vasoconstrictors, adhesive molecules and coagulant agents.
---	--	---

VAT's non-invasive, non-drug, medical technology has a long record of safe use. VAT is based upon the basic principles of physiology, using the body's own protective mechanisms to move the circulation toward homeostasis.

Every eight minutes in the US, there's an amputation. Over 80% are diabetic patients.

The battle against diabetic ulcers is complex and frustrating. There are no good solutions. Compromised circulation leads to neuropathy which all too often leads to ulcers, gangrene and amputation. After amputation, the patient's quality of life plummets. Most never walk again and the 5-year mortality rate is extremely high. To see how VAT is improving the outlook and bringing new hope for diabetic patients, [click here](#).
